

HiLASE Centre is pleased to invite you to attend the seminar

How to write successful scientific manuscripts: an overview and discussion

Prof. Dr. Sci, Nadezhda M. Bulgakova Ph.D.

HiLASE Centre, IoP

Scientific manuscript (as well as PhD thesis, project, or report) is an important part of scientific research, one of the main research products, which allows to share ideas and new findings with scientific community and to make the authors' names known in the scientific world. Information presented in the manuscript is the result of a lot of efforts and a large amount of time devoted for investigations. To enable the results of the work to come to fruition, the manuscript must be written logically, easy for reading, with thorough enough details but without irrelevant information.

This seminar aims at raising discussion on how to prepare a successful manuscript. The main preparation rules will be overviewed:

- From what to start;
- How to prepare illustrations;
- What must be avoided;
- What parts are necessary;
- How to prepare literature;
- How to write introduction, abstract, and conclusion;
- What can be annoying for Editors and Referees; and some other important aspects that should be involved in the writing process.

TEAMING FOR SUCCESS

Finally, it is expected and desired that audience will actively discuss the presented opinion on manuscript preparation process. A vivid discussion can help to prepare a very short but useful guideline which could be distributed among HiLASE researchers.

When: Tuesday, **19/06/2018 at 14:00**

Where: Seminar room, HiLASE Centre
